INTRODUCTION

WELCOME TO VALHEIM!

ODIN CALLS UPON YOU, HIS CHOSEN WARRIORS,
TO RID THE LAND OF A GROWING EVIL.

ODIN'S SWORN ENEMIES, THE FORSAKEN, HAVE INFESTED THIS WORLD AND IT IS UP TO YOU TO DEFEAT THESE POWERFUL BEINGS AND CLAIM YOUR SEAT IN VALHALLA.

WILL YOU BUILD UP ENOUGH STRENGTH TO DEFEAT THE FORSAKEN, OR WILL YOU MEET YOUR END IN BATTLE?

GLORY AWAITS!

WORK IN PROGRESS

GOAL OF THE GAME

In *Valheim*, you take on the role of 1 to 4 viking warriors sent on a quest to defeat one of the 4 Forsaken: Eikthyr, The Elder, Bonemass, or Moder.

Each scenario pits you against one of these formidable foes, who will attempt to stop you with devastating attacks and personalized event decks. As you explore the land, you must gather resources, craft equipment, and fortify your home, all in preparation for the final, epic confrontation at the boss's altar.

Starting with only simple clothing and a basic house with a small fireplace, your journey requires you to venture into the wild to fend off creatures, improve your homestead, and enhance your weapons and armor. Success hinges on your ability to devise a strategy and strengthen yourself before facing the Forsaken in battle.

Valheim is a cooperative experience, where players can join forces to achieve both group- and individual goals. However, the game also offers a solo mode for those who prefer to take on the challenge alone.

WORK IN PROGRESS

SETUP

SINGLE SCENARIO OR CAMPAIGN MODE

In a game of *Valheim*, you play one of many premade scenarios. You can pick and play any scenario you wish, but for first-time players, we recommend that you start with scenario 1. The scenarios, as well as their setup and objectives, can be found starting from page xx.

If you really want to prove your worth to Odin, you can also play 4 scenarios in a row as a campaign, where you get to challenge each Forsaken before you move on to the next. Every time you win a scenario in campaign mode, you will unlock powerful, new benefits for the next scenario. You can read more on campaign mode on page xx.

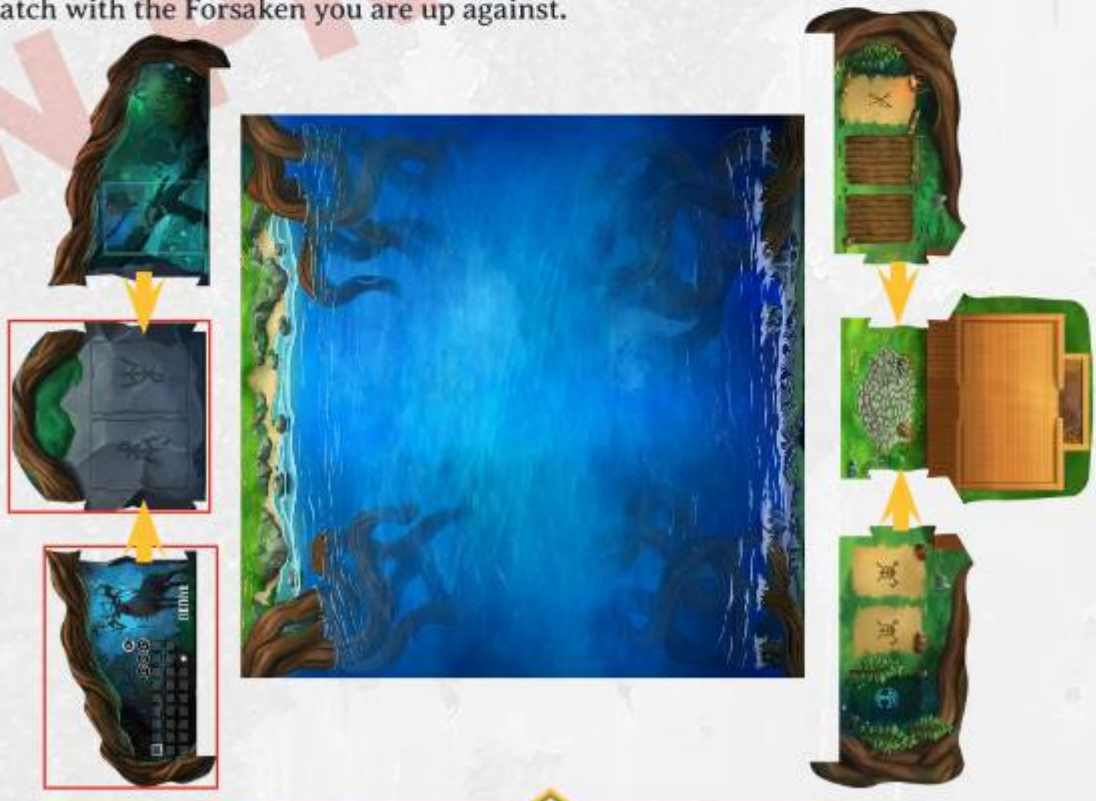

GAME SETUP

Pick your scenario and then follow these steps. Read the scenario description carefully to ensure that all necessary tokens are placed.

1. **PLAY AREA**

Assemble the play area like so:

Note: These board pieces squared in red are dependent on your chosen scenario. Make sure that they match with the Forsaken you are up against.

WORK IN PROGRESS

2. MAP LAYOUT

Add the tiles for the map layout based on the scenario instructions. The house tile can be flipped to either side based on your preference, but all biome tiles should be placed face-down (misty side up).

The tiles have a little white arrow at the top. These arrows should always point in the same direction for all tiles. You won't be using all tiles from the biomes in each scenario, so make sure you randomly pick the number you need, and put the other ones back in the box without looking at them.

3. FORSAKEN ALTAR

To prepare the event deck before game start:

- Take the event cards from the chosen scenario and divide them into 2 decks: phase I cards and phase II cards (see marking on the back of the card to identify the different phases).
- Shuffle these 2 decks individually.
- Combine to form 1 single draw deck, with the phase II cards as the bottom half.
- Place it face-down on the Forsaken altar board.
- Place the Forsaken miniature behind the deck.

Place any gifted items indicated under the scenario description on top of the event deck - place 1 of each in the order listed, but no more than the number of players.

Example: the gifted tokens for scenario 1 are wood, hide, stone and resin. If you play with only 3 players in your group, you only place the first 3 listed (so, no Resin gifted to your group this time around).

4. CARDS

Prepare the different decks of cards like so:

- Shuffle the food deck and Haldor's deck and place them each on their spots, face-down.
- Place the weapon cards and armour cards (collectively called the equipment cards) on the equipment slots face-up.
- Place the creature cards on the creature board, regular side facing up (the veteran side with the star facing down).
- Keep the Forsaken special cards nearby.

WORK IN PROGRESS

PLAYER SETUP

1. CHARACTER

Every player should pick their character by collecting a playerboard and its matching miniature. You can also pick your player colours by choosing between 4 spirit animals:

- The Green Dragon
- The Blue Raven
- The Red Ram
- The Yellow Wolf

Attach the spirit animal to your playerboard and the colored ring to your miniature's base. Place all player miniatures on the house tile.

2. SKILLS

Personalize your playerboard like so:

- Draw 2 upgrade skills of each type.
- Draw 2 power of Odin skills.
- Pick 1 of each type and put the rest away.
- Add all 3 skills to your playerboard face-up, in the corresponding slots.

More on these skills on page xx. The upgrade skills are elements you can unlock during the game while the power of Odin is available to use from the start.

3. HEALTH & STAMINA

Set your health at full by placing a red cube on the top slot (slot 8), and set your stamina at half by adding a yellow cube to the middle slot (slot 4 counting from the bottom).

Note: Many of the components you've just set up are related to the actions that players can take. Their use will be explained in more detail under actions on page xx.

If you are playing in a group, go ahead and present your characters to each other before you start the game, so everyone knows each other's skills.

WORK IN PROGRESS

SKILLS

Skills are aspects of your character that can help outline your individual strengths and goals. Each game can be played with a new combination of skills to vary your playing experience.

UPGRADE SKILLS

Each player starts with two different upgrade skills, one that needs a challenge to be completed 1 time and a skill that has a challenge that needs to be completed 3 times to unlock the rewards. Once the power is unlocked you can use them for the rest of the scenario. To mark how many times you achieved the requirement to unlock the skill, place a white cube on your player board underneath the specific skill.

Every time your player character dies during the scenario, you remove one of the cubes from the board, if you have any. This can mean that a skill you have unlocked now changes back to not be available - at least until you fulfil the requirement once again.
Upgrade Skills are personal and cannot be used on other players, or in other player turns.

POWER OF ODIN SKILL

Power of Odin skills are abilities that require stamina to use. Simply spend the stamina cost to activate the skill. These skills can be used at any time (also in other players' turns), on any player (no distance limit) and take effect instantly (even during combat calculation).

WORK IN PROGRESS

GAME STRUCTURE

Each player takes their turns in clockwise order around the table. Each turn is followed by an event phase where unforeseen events will take place in the realm of Valheim.

PLAYER TURNS

During the player turn, the active player has 3 available actions on their turn. When you have taken your third and final action, your turn automatically ends.

EVENT PHASE

When you end your turn, you enter the event phase: draw the next card from the event deck and do what it says. Even though you just ended your turn, you are still considered the active player, as this may be relevant to the effect of some of the cards.

Sometimes you can't draw an event card because there are items on top of the event deck. In this case, the active player takes one of those items instead of drawing a card, and places it accordingly. For example, each scenario starts with a few gifted items. These are free resources and items for the players to collect and make the most use of. Other times, an event card will require you to place a number of tokens or creatures on the card. In those cases, you will then remove and/or place one of these at the end of your turn, instead of drawing an event card - they may act as countdown timers. More info about this can be found on the event cards, themselves.

The Elder Event deck with resource tokens:

When everything that happens as a result of the event card or placing the object has been done, the event phase ends and it is now the next player's turn.

GAME END

Players win or lose the game together, there are no individual victories or defeats.
To win, you must complete all the objectives of the chosen scenario, which usually includes defeating the Forsaken in a final arena battle. If all players are knocked out in this arena battle, you lose.

If any player needs to draw a card from the event deck but the deck has run out, you also lose (you do not reshuffle the event deck in the same scenario).

WORK IN PROGRESS

ACTIONS

On your turn, you have 3 available actions. Use these actions effectively to do all the things you want to do before summoning the Forsaken. Explore, gather and craft your way forward.

You can choose between any of the actions listed below. The same action can be taken multiple times in the same turn. The actions available during a fight against the Forsaken are explained later.

Certain actions can only be done while you are in the house (your character is placed on the house tile), while others can be done anywhere. Here's a list of the various actions you can take in your turn. Each action is also explained in detail below.

- **IN THE HOUSE ONLY**

Cook, Eat, Craft, Brew, Fabricate, Check on Bees, Ignite.

- **ANYWHERE***

Explore, Move, Exchange, Build a Boat, Sail, Trade, Collect.
**Some of these actions require you to be on specific spaces.*

WORK IN PROGRESS

ANYWHERE

- **MOVE**

Move up to 2 spaces. If you run into creatures, you must end the movement action, even if you could have moved another space. Same thing goes if you want to do another action, like stop to gather resources - you then end your movement action even if you could have walked extra spaces.
Spaces are separated by white lines. Some spaces, like the house space, take up an entire tile. Crossing from one tile to another also counts as moving one space. If you move into a face-down tile (misty side is up), you flip it as you immediately explore it: Place it face-up on the same spot on the map, making sure the arrow points in the same direction as when it was face-down. Then continue your move onto that tile - there will be 1 or 2 spaces that are now adjacent to the space you came from - and you must choose 1 of these to go to, if possible (see below).

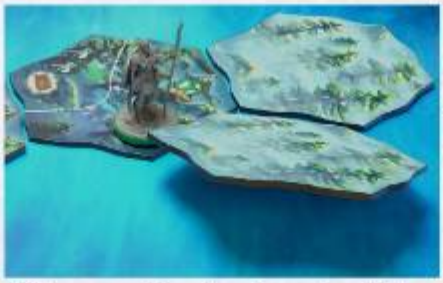

- If a space has a -1 symbol, it means that it costs 1 extra movement to go there.
- If a space has a -1 symbol, it means that you must spend 1 stamina to go there.
- If a space has a blood leech icon on it, roll a black die. Ignore any ! result, but take any damage rolled.
- If a space has a berry bush icon on it, it means that you can go collect berries here (see under collect resources).
- Some spaces will have creature icons. Add 1 of the indicated creature per icon to those

spaces when a tile is first explored.
– Some spaces will have chest icons. The first time a tile with a chest space is explored, add 1 random chest token that matches the icon to that space face-down. Note the difference between a common chest and a rare chest.

Green Player is on a space adjacent to an unexplored black forest tile.

They spend 1 action to explore it by flipping it face-up.

Once flipped, check the icons and add the needed creature minis or tokens.

- **COLLECT RESOURCES**

If you are on a space with the resource icon, you can roll the .
You collect 1 resource per hand symbol rolled and add the tokens to your shared resource stash.
– If the result also has a ! symbol, you also attract the attention of nearby creatures: all creatures on your tile and on all adjacent tiles move 1 space closer to you. Note that this can result in combat for you or even other players on spaces between you and the creatures. Being on a space with any creatures automatically starts combat. If there are nearby creatures, move any adjacent creatures onto your space.
– Berry bushes: the space with the berry bushes in the meadows allow you to roll the and gain 1 health per hand symbol rolled. As with other resource rolls, any ! results will provoke all creatures within 2 spaces to approach you.

Red Player rolls to collect some , while 1 Abomination and 1 Skeleton stand within 2 spaces away.
The first roll gives 1

Red Player might be a bit greedy, and decides to roll again. Unfortunately this time, despite getting 2 , they also attract the attention of the 2 nearby creatures.

Creatures move 1 space closer to the active player. As the Skeleton enters the player's space, combat automatically starts.

WORK IN PROGRESS

- **BUILD BOAT**

To build a boat you need to be adjacent to a body of water. Pay the cost for a boat and place a boat token on your space. Unlike other constructions, you can build this outside of your house.

- **SAIL**

If you are on a space with a boat, you can sail to a new location. Other players may jump on the boat and join you on your voyage if they pay 1 Stamina and are within their movement limit (default 2 spaces) of the space with the boat, without any obstacles, such as creatures, blocking their way. To sail to another space:

- Move the boat with your character to the edge of any other tile adjacent to the same body of water.
- Pick a space to disembark on, as long as it is on the specific tile edge you landed on.
- If it is an unexplored tile, then first reveal the tile, but remember to stick with your choice of tile edge to disembark on.
- Whether or not combat occurs, your action ends with you (and any fellow travellers) placing your figure(s) on the space chosen.

Blue Player is standing on a space adjacent to the water, and spends the correct amount of resources to build a boat. Because Green Player is standing within 2 spaces from Blue Player, they can also join the trip.

Both players explore the Mountain tile on the other side of the lake. They flip the tile as soon as they reach land, and face the concequences by placing the correct miniatures matching the icons.

- **EXCHANGE EQUIPMENT**

You can exchange any number of equipment cards or player tokens with another player on the same space as you. When exchanging, it is not a requirement to give cards/tokens to receive cards/tokens. You can also use this action to drop off equipment at the house, if you are there (place the card(s) by the house, face-up). Since you cannot carry more than 3 pieces of equipment cards, this can be a way to make room for more, while leaving other equipment for other players to pick up.

- **LOOK AT HALDOR'S WARES**

Haldor's camp allows you to trade and check his deck of special equipment cards. If on his space, you may spend 1 action to reveal the first 3 Haldor cards. You can then spend 3 to buy 1 of them, if you want. Afterwards, shuffle the remaining rare item cards into Haldor's Deck. If you want to have more than 3 Rare items to choose from, you can spend another trade action to reveal additional 3 Rare items to choose from. You do not have to buy anything, just because you "browsed" the items available this turn. Once you are done buying, shuffle the Haldor deck, including any revealed, but not bought, cards.

Green Player spends 3 to look at Haldor's Wares

Green Player can then decide to buy a very rare piece of equipment

IN PROGRESS

- **RANGED ATTACK**

If you are adjacent to a space with one or more creatures, you can use a ranged weapon (not a bomb) to attack that space. Roll your dice as normal, but do not roll . If any creatures survive the attack, they move into your space and combat continues as normal.

Here, the Red Player wants to attack the Skeleton by surprise with the Crude Bow, which is a range weapon.

Unfortunately, Red Player misses their attack and now the Skeleton is alerted

The creature moves to the Red Player's space and combat automatically starts.

IN THE HOUSE

- **COOK FOOD**

Reveal the top food card and place it next to the deck. By default, you have a limit of one slot for prepared food.

If you have crafted the table, you unlock the second food slot and may now reveal the top 2 food cards when taking this action.

- **EAT PREPARED FOOD**

Take 1 prepared food card and discard it. In the beginning you may gain the benefits at the top of the card which can include recovering mainly health but also stamina as well as adding a re-roll token to your playerboard.

Once you have built the cauldron, you may gain the benefits at the bottom of all food cards instead.

- **CRAFT WEAPONS OR FURNITURES**

Construct a piece of equipment or furniture of your choice, by discarding the indicated number of required resources. Crafted equipment is placed on your playerboard (max. 3) and crafted furniture is placed inside the house.

You are allowed to freely browse through the equipment decks to find a weapon or protective gear to craft.

- **IGNITE WEAPON**

When you unlock the fire table, you can spend 1 to permanently add a fire token to one of your weapons. Weapons with fire deal 1 extra damage in combat against creatures not resistant to fire. Be careful and make sure you have the needed for this - especially if you need to burn the Greydwarf nests.

WORK IN PROGRESS

- **BREW MEAD**

Take 1 mead of your choice and add it to your playerboard (max. 2). Making a mead requires a fermenter.

- **FABRICATE A BOMB**

Take 1 bomb and add it to your playerboard (max. 2). Fabricating a bomb requires a bomb table.

- **CHECK ON BEES**

Take a random honeycomb token and add it to a vacant inventory slot on your playerboard. You can do this action only once per turn (give the bees a break to get more honey...). Like mead and bombs, the honeycomb can be saved to be used in a later turn. honeycombs are a good source for stamina recovery.

- **SUMMON HALDOR**

Yes, Haldor does make house calls, in case you can't find him or simply don't have the patience. Pay 1 to have him visit, then trade with him just as if you had encountered him in the black forest. Haldor goes away again at the end of your turn.

WORK IN PROGRESS

FREE ACTIONS

Free actions are actions that do not count towards your 3 action limit. Most of them have no limit on how many can be taken in your turn, but they might have other limitations.You cannot use actions, free or not, if you are unconscious.

- **USE MEAD**

Apply the effect of a mead you have to yourself or another player on the same space as you. health meads recover 2 health, stamina meads recover 2 stamina and antidote meads immediately remove any conditions applied to you (poisoned or frozen). Health meads can also be given to players who are currently knocked out, essentially reviving them with 2 health. Discard a mead token after it has been used.

- **USE HONNEYCOMB**

Apply the effects of a honeycomb token you have to yourself. Each honeycomb token has a different effect. Some of them give you an additional action when it is used, others give you extra health, stamina and/or a reroll token. Discard a honeycomb token after it has been used.

- **THROW BOMB**

(During combat only, on same space but never in the house). Discard the bomb token after it has been used. One bomb has an area effect, so the damage rolled affects each individual creature for full effect of the die. The other type of bomb deals more damage, but only to a single target.

- **DISMANTLE EQUIPMENT**

(At the house only). Place an equipment card back in its deck and gain one of the resources indicated in its cost. You can only dismantle once per turn.

- **USE POWER OF ODIN SKILLS**

Pay the indicated Stamina cost to do so.

- **USE UNLOCKED UPGRADE SKILL**

Pay the indicated cost, if any. Unlocked skills have different requirements, and some are passive, while others must be activated.

- **USE EFFECT FROM EQUIPMENT**

Some equipment allows players to perform a free action. The free action of each equipment can usually only be done once per turn.

- **PICK UP ITEMS FROM GRAVESTONE**

Pick up dropped items by a player gravestone. Return the gravestone to its rightful owner.

- **LOOT A CHEST**

Reveal a chest at your location. Take the revealed content shown on the back, then discard the chest token.

Common chest: Meadow and Black Forest

Rare chest: Swamps and Mountains

WORK IN PROGRESS

EVENT DECK

EVENT CARDS

At the end of your turn, draw an event card and immediately resolve it. These cards will have unforeseen events that players will have to face.

Some event cards will be resolved immediately while others keep its effect in play for a certain number of turns. If the event card has a longer lasting effect, place the card face-up on top of the discard pile and place orange markers on top depending on the number of players. Players will on their next turn remove one of the markers instead of drawing a card until the event cards has been completely resolved. Then players will go back to drawing an event cards as normally.

Some cards instruct you to move creatures towards nearest players. This only goes for revealed creatures and only creatures on the same islands as players - creatures on islands with no players do not move. If there are multiple paths a creature can take towards a player, you choose, but always prioritise the shortest route, if possible. Creatures are never affected by effects on tiles, like loss of stamina, slowed movement, etc.

If you cannot do what the card says, e.g. because no spaces are available, then simply ignore the rest of the card text for no effect.

Once a player cannot draw an Event card because the deck has run out of cards, time runs out, and the boss has overtaken the realm. Players collectively lose immediately.

WORK IN PROGRESS

Eikthyr
Event Deck

The Elder
Event Deck

Bonemass
Event Deck

Moder
Event Deck

FORSAKEN APPEARANCE

In most Scenarios, the Forsaken could appear on a tile in the world from the effects of event cards.

These cards might also ask you to add creatures to this tile. In this case they all take up the whole tile and not just the individual spaces.

- You cannot attack or hurt any creature on the tile occupied by the Forsaken.
- You also cannot move onto the tile.
- The creatures will not leave a tile with the Forsaken on it until the event card instructs so (see how to raid the house below).
- Any player already on the tile where the Forsaken appears rolls a , takes the damage rolled and is then immediately moved into the house. If a ! is rolled, the unfortunate player is knocked out before moving to the house.
- If a Forsaken moves into a space with players, they all roll a to see if they take damage. Regardless of the result of the die, the players are immediately moved back to the house.
- When these cards ask you to carry out an effect once a specific number of creatures are present on the tile, it includes any and all creatures that were already present on the spaces of that tile when the Forsaken was placed.

RAIDS

Anytime creatures enter your house tile, it is considered a raid.
If no conscious players are in the house when a raid happens, the creatures successfully carry out the raid. This includes situations where players are present when the raid starts, but are then knocked out due to combat.
A successful raid:

- Count how many creatures are currently in the house
- Remove 1 piece of furniture per creature (the raiders destroy the furniture).
- Players pick what is destroyed.
- You do not get the construction resources back from the destroyed furniture.
- If there are more raiding creatures than furniture, then also discard any prepared food.
- Afterwards, all creatures retreat into the wild, remove them from the house.
- If a raid is caused by the presence of a Forsaken, treat all raiding creatures as veteran creatures (flip their card to the veteran side).

WORK IN PROGRESS

ENEMIES

HOSTILE CREATURES

There are three types of hostile creatures that will oppose you in Valheim:

- **Regular creatures: the smaller creatures, ranging from the relatively harmless Greylings to the fierce Fenrings of the mountains.**

Greyling Grewdwarf Skeleton Draugr Fenring

- **Large creatures:** Beyond the meadows, there is one large creature roaming each biome: The Troll can be found in the Black Forest, the Abomination in the swamps and the Stone Golem in the mountains. They behave and fight like regular creatures, but are tougher. They also give you as rewards, when defeated.

Troll Abomination Stone Golem

- **The Forsaken:** As the end-game challenge of most scenarios, forsaken are huge, fearful entities that need to be defeated on the special arena board. More on Boss fights on page 23.

Each Forsaken is associated with a specific biome: Eikthyr has its altar in the Meadows, The Elder in the Black Forest, BoneMass in the Swamps and Moder in the Mountains.

If you ever need to place more creatures than you have in the box, instead place the next, slightly weaker, available small creature with health as close to the listed creature as possible.

Example: if you need to place a Draugr (health 4), but no more are available, place a GreyDwarf (health 3), instead. If there are also no weaker creatures available, use tougher ones, instead. Large creatures do not get replacements - there can only be one of each type of large monster in play at a time.

WORK IN PROGRESS

COMBAT

When creatures and a player end up in the same space for any reason, combat is initiated. Any movement leading up to the combat is ended immediately. Resolve the combat immediately by doing rounds of dice rolls and apply the results. Use the red cubes as damage markers to remember how much damage a creature has taken. Continue rolling dice and applying the results until only one side is left standing.

Once combat is completed, continue the turn as normal. Once you defeat a creature, you get the loot indicated on the creature card, if any, and add it to the resource stash. Remove the creature from the board.You always roll all relevant player dice together with all relevant enemy dice and resolve player dice before enemy dice, but you must resolve both, even if the creature is defeated during this very turn.You can never roll more dice than what comes default with the game, e.g. you can never roll more than two defensive dice, even if your sum of defensive equipment dice exceeds that.

BLACK DIE

They are the enemy dice and represent the creatures' attacks on you.
Hit symbols deal 1 damage per symbol: lose 1 health per hit symbol.
You can roll to negate damage caused by attacks in combat, as long as the attack does not shield break (see below).

SPECIAL EFFECT ON BLACK DIE

Special symbols ! might cause a special effect. If you roll any ! results, check the creature card for its special effect, if any, and apply that effect with the rest of the results.

Special effects can be:

- **Frozen:** place a frozen token on your character illustration. For the rest of this combat, you lose 1 stamina after a turn where you were in combat, including this one. Once combat is complete, remove any frozen token. If you are ever frozen outside combat, you only lose 1 stamina before shaking off the effect.
- **Poison: place a poison token on your character illustration. For the rest of this combat, you lose 1 health after a turn where you were in combat, including this one. Once combat is complete, remove any poison token.**

You can only have 1 status token of each type at any time. If you already have a poison or frozen token, you do not add any additional tokens, or take more stamina or health penalties.

- **Shield break:** immediate effect for this attack. All damage dealt by the creature this roll goes right through your protection. Ignore blue dice results and any shield bonuses.
- **Extra Shield:** the creature negates 1 damage dealt to it in this attack turn only.
- **1 Extra Damage:** the creature deals 1 extra damage, regardless of what is rolled on any other dice.

WORK IN PROGRESS

DEFENSE DIE

The are player dice that you can roll if you have protective gear. If you have multiple defensive items of different types, add together the defensive dice on them.

Each shield rolled removes 1 hit against you (unless the enemy has an active shield breaking ability, in which case all your shields are ignored). Shields do not block effects such as poisoning and freezing.

In end game arena fights, the Forsaken might deal 2 or more damage per result. Blocking damage with always happens after all damage has been modified.

Example: you have rolled enemy 3 hit results and 1 player shield result. The boss attack in this example does 2 damage per hit result, so their total damage is 6. Your shield result blocks 1 damage from the 6, so final damage dealt to you is 5.

ATTACK DICE

Attack dice are or found on your weapon cards. If you have multiple weapons, pick one and roll dice for that weapon.
If you have no weapon on you, roll 1 , but treat the double result as a 1 result.

CONSUMABLES IN COMBAT

Reroll tokens: Discard a reroll token to reroll any result of yours, but not

Bombs: Throwing a bomb during combat is a free action and can be done before or after rolling your dice. Some bombs are area effect weapons, meaning they damage every creature on the same space. The other type only affects one target, but go through shields. Bombs do not damage players but cannot be used in the house. You do not roll enemy dice when you throw the bomb, only when fighting with regular weapons on the same space.

Meads: Any mead and its effect can be used with immediate effect. Even after you have rolled the dice but before you apply the damage.

OUTNUMBERED COMBAT

If you are in combat with more creatures present than players, you are outnumbered. As long as you are outnumbered you take 1 extra damage every round, if the creatures rolled at least one hit.

WORK IN PROGRESS

RANGED COMBAT

If you are adjacent to a space with 1 or more creatures, you can use a ranged weapon to attack that space. Roll for dice as normal, but do not roll black dice. If any creatures survive the attack, they move into your space and combat continues as normal.

COMBAT WITH MULTIPLE PLAYERS

If multiple people are on the same space where combat happens, each player in that combat rolls and applies combat dice once before passing the dice to the next player. Even if a player rolls only blank results, they still pass the dice to the next player in the combat.
Once the combat is over, the player who was having their turn resumes their turn.

COMBAT WITH MULTIPLE CREATURES

Here, the Fenring will be the first creature to attack. Once defeated, 1 of the Skeletons will take over

Players only fight one creature at a time. If there are multiple creatures on the same space where combat happens, you only roll black dice for the current strongest creature. A creature's strength is determined by the health stat on their creature card. If the strongest creature is defeated, the now newly strongest creature attacks instead and so on.

Players can always choose which creature in the combat to deal their damage to, but they can not choose which creature attacks them. That is always the strongest creature.

You can not split a critical attack hit (2x) to deal damage to multiple creatures but you can divide damage from multiple dice results onto multiple creatures.

ASSISTING IN COMBAT

Other players may pay 1 stamina and come to your aid. They can join an ongoing combat at any time, if they spend 1 stamina and are within movement range, according to their current movement ability (plus any modifiers). Default movement is 2 spaces.

Example: yellow player wants to start combat with the 2 Skeletons and the Fenring. They know not to be enough to defeat all the creatures. Red player is within 2 spaces, so by spending 1 stamina, they decide to join the fight and move to yellow player's space.

WIP IN PROGRESS

ZERO HEALTH / STAMINA

When a player's health drops to zero:

- If you are the active player your turn ends immediately. You are not killed, but rather rendered unconscious - you will get back on your feet the next turn.
- Place your gravestone token on the space where you were knocked out. Temporarily remove 1 of your equipment cards, if you have any, by placing it to the side of your player board. Any player on the space with a gravestone can pick up the dropped equipment by removing the gravestone as a free action. If you were knocked down while in the house, you do not drop any card or place the gravestone.
- If you already have a gravestone in play, simply move the gravestone to the new location. You then permanently lose the equipment cards dropped at the older location - discard the card.
- Move the player character to house. You do not gain the benefits of furniture like rug, throne or bed. Place your figure on the side, to remind everyone that creatures will ignore this character until they are back on their feet again.
- Next turn, you start back in the house with only 1 health and 1 stamina.
- Creatures do not approach or attack unconscious player characters - they are ignored when event cards have you place or move creatures in regards to any players.

When a player's health drops to zero in a boss fight:

- Your turn ends immediately, if you were the active player.
- You drop 1 item of your choice. Other players can pick it up for no action, if they get to the space where it dropped (mark with a gravestone, if needed).
- Other players can spend 1 health mead if at your space, to revive you. You then start your next turn on your feet again, but only with the amount of health you got from the mead, or mead(s), if more were given. Your stamina will be reduced to 0.

When a player's stamina drops to zero:

The biggest downside to having 0 stamina are the things you can no longer do that require stamina. You can never choose to spend stamina you don't have. If however you are forced to lose stamina, but you have no stamina left to lose, lose that same amount as health instead.

WORK IN PROGRESS

BOSS FIGHT

SUMMONING THE FORSAKEN

Once the requirements of the scenario have been met, a player can spend 1 action to summon the Forsaken at the altar. When that happens, count the number of phase II cards left in the draw pile, and reduce the health of the Forsaken by that amount. If no cards are left, the Forsaken starts with full health.

When a player triggers the Forsaken fight, players may choose to start on any available spaces on the arena; the main board is not used anymore. Then place the Forsaken on the space with the altar illustration on the arena (it is the center space for the first 3 bosses). Turn it to face the space with the player who summoned the boss.

Once all players are ready to face the Forsaken, remove the event card deck and the creature card deck and flip the Forsaken altar to reveal the boss arena.

Shuffle and place the arena cards deck on the creature board, face-down, and the Boss card on the illustration. Place the mini on the designated spot of the arena.

Finally, starting form the active player, place the miniatures on strategic spots and begin combat.

During the Forsaken fight, player turns work a bit differently. Players still take turns clockwise around the board, starting with the player who summoned the Forsaken (activated the boss fight).

The active player only has 2 actions during end game fights, move and attack, and these must be carried out in that order.

- Move: to a space (not containing the Forsaken) within movement distance. Movement is optional. Observe any restrictions or penalties on the arena.
- Fight: roll your attack and defensive dice, as well as the black dice for the boss. Fighting is not optional - you must roll combat dice every turn. Your defensive dice can only be used against regular damage results, not for any card effects. Note that unlike the regular tiles, you can use non-ranged weapons and bombs while being on a space adjacent to the Forsaken (since you can never share a space with the Forsaken).

Resolve the dice in this order:

1. Player attack dice (damage the Forsaken)
2. Blank black dice results (move/rotate the Forsaken)
3. Black damage results and blue defense results, to negate the black results
4. Black special results: draw a card. Blue defense results cannot be used to negate any damage from the card.

Note: all Forsaken except Moder deal +1 damage if you are on the adjacent space directly in front of the Forsaken.

IN BRIEFINGS

In addition to movement and fighting, you can do these actions for free in your turn:

- Toss bomb: roll the damage dice for throwing the bomb.
- Pick up gear: pick up any gear dropped in a space, e.g. by an event, or a defeated player.
- Revive another player: you can spend a health mead to bring back another player into the game - they will then start with just 2 health points (from the Mead).
- Activate power of Odin skill.
- Use unlocked skill(s).
- Flip power of Odin skill: Once per end game fight only, you may flip your power of Odin skill token, to its other side.

WORK IN PROGRESS

THE FORSAKEN

EIKTHYR

His antlers are branches of iron, they crack the rocks and bring down mountains. His hooves are the sound of thunder. His voice a howling gale.

Eikthyr is an abnormally large stag with iron chains wrapped around his electrified red antlers. He will summon the power of lightning to strengthen his attacks and his powerful antlers and kicks will hurt players who get too close to him.

Eitkhyr's arena is made up of an inner ring of spaces and an outer ring of spaces.

- Ranged icon: to attack Eikthyr from the outer ring, players have to use a ranged weapon.
- -1 stamina icon: players must spend 1 stamina to enter this space. If you place your character here when setting up, you do not pay any stamina.
- +1 damage icon: players deal 1 extra damage to Eikthyr if they attack from this space and roll any hits.

THE ELDER

First of the Forest, King-in-the-Wood, Lord over those who dwell at his feet. His roots will grow where cities once stood, their blood his wine, their flesh his meat.

The Elder is a towering humanoid tree-like entity with multiple thin branches sprouting out of his slender, bark-covered body. As King in the Wood, he will use his powers to shoot vines and hit players with his branch swipe. He is vulnerable when players can hit him from behind, dealing 1 additional damage to the player's total hit count. Players will first calculate and deal their damage before moving the Elder. Of course, he will try to avoid back attacks and spawn vines to slow down player movement.

The Elder's arena is made up of a single ring of 6 spaces.

- -1 stamina icon: players must spend 1 stamina to enter this space. If you place your character here when setting up, you do not pay any stamina.
- The Elder has 4 dangerous branches protruding from his upper body; if players deal damage to all of these, represented by the 4 separate damage spots on the Elder board, the Elder loses the ability to break shields with his attacks. Players must choose if they want to focus on destroying these branches, or not. Destroying the branches does not contribute to draining the overall health of the Elder.

WORK IN PROGRESS

BONEMASS

Wanderer, look to your feet, that tread upon our tomb. One thousand bones without their meat, will drag you to your doom.

Bonemass appears as a gigantic humanoid mass comprised of toxic ooze, mud, and skeletal remains, likely absorbed from nearby tombs situated close to his altar. As ruler of the swamps, he bashes at players with toxic slime and globs of goo, that will deal extra damage.

Bonemass' arena is made up of 8 spaces, with 2 of the spaces at a ranged distance. The central altar space is for Bonemass and can not be moved into by players.

- Ranged icon: to attack Bonemass from this space, you have to use a ranged weapon.
- Poison dice roll icon: when entering this space, you must immediately roll 1 . If the result is ! you are now poisoned. Ignore any hit results

WORK IN PROGRESS

MODER

Black wings across the moon and sun, down from the mountain our mother comes. Her weeping tears will fall like rain, her voice will call us home again.

Moder is a massive frost dragon with black scales, a white fur mane, and tattered wings.
She will attack players with fearsome ice breaths, freezing players and draining their stamina.
Moder will try to reach her nest to heal and spawn even stronger attacks.
When Moder is dealt damage, first check where the health tracker is. If the tracker is currently on a space with a shield symbol, Moder is protected by a shield. Then deal the damage, and reduce damage by 1. The shield does not come into effect on turns where the health tracker does not start on a space with a shield symbol.

Moder's Arena is made up of a single frozen lake space surrounded by 4 snow spaces. Players will stand on the frozen lake and cannot move onto any snow spaces.

- The Altar space on the left is where Moder starts. She can move along the snow spaces towards her nest at the far end of the arena.
- The green circle with ranged icon: you can choose to climb onto the small peak in your turn, by spending 1 stamina - this is the only movement players can do, during the arena fight against Moder. When you are here, any weapon you attack with is considered a ranged weapon. You will slide back down to the frozen lake at the end of your turn. You can climb back on in your next turn, if you want, by spending 1 more stamina.

WORLD IN DARKNESS

FAQ

COMBAT

Do the bonus hits/shields from my skills and equipment count, even if I rolled blanks?
No. For any bonus to count, you must at least roll 1 hit/shield. This goes for creatures and their outnumbered bonuses too. Fire bonus on weapons also doesn't count, if the player doesn't roll any hits.

What happens if a creature can go multiple places?
As a general rule, if anything in the game can have multiple, equal outcomes, players always get to pick. This can include creature movement or placement, boss turning, etc.

Can a player be healed even if an attack takes their health to 0?
The results of all combat is applied once everything has been calculated. Using meads or Odin Powers to heal is part of calculating the final damage. If you do anything to heal your character, this is calculated together with any damage you take, even if you make the decision after seeing the dice results. No player can have negative health (below 0).

Can a Forsaken heal themselves in a combat turn where their health drops to 0?
This works in the same way as damage and healing for players. The Forsaken is only truly defeated if their health is still at 0 after all calculations have been done. No creature or Boss can have negative health (below 0).

Can I roll more dice than what is available?
Even if your equipment totals to a larger number of dice, than what comes with the game by default, you can never roll more than the amount of dice that the game comes with. This means a maximum of 2 yellow, 2 red, 2 blue and 3 black dice at any given point.

WORK IN PROGRESS

FURNITURE

Do I still get the end-of-turn furniture benefits in the house if I am knocked out?
Since your character does not regain consciousness until you have your next turn, you also do not gain any benefits in the house in the turn you are knocked out.

CRAFTING

What happens if I want to craft equipment but I don't have space on my player board?
A player can never have more than 3 equipment cards on their player board. You must then first dismantle or trade an equipment card to make space for a new equipment to be crafted.

RULE VARIATIONS

RESOURCES

Before starting the game, you can decide if your group wants to play an easier, nicer version, or the slightly harder version, where you must plan (and barter) a bit more.

In the easier version, all collected resources go straight to the house stash. Whenever resources are spent, they are taken directly from the house, by whoever is currently the active player.

In the harder version, you keep whatever resources you obtain, in front of you. You can drop off and pick up resources at the house for no action, while you are in the house. You can also exchange resources with other players on your space, by using the exchange action. To do anything that requires spending resources, you must have the resources required in front of you, or be at the house with the required resources present in the house stash.

CAMPAIGN MODE

You can play the scenarios in any order, but if you want, you can use the campaign board and play a campaign consisting of 4 scenarios, 1 for each Forsaken.

In that case, use the campaign board:

- Place a token on each slot on the campaign board, to cover the resource yet to be unlocked.
- Remove the cubes from left to right as you complete each scenario.
- Choose a scenario with Eikthyr and play that as the first scenario in the campaign.
- For your second scenario, you will choose an Elder scenario, then a Bonemass scenario, and finally a Moder scenario.

When playing a campaign, metals will be blocked from mining until you complete scenarios. You can still get lucky and find them in earlier scenarios - you just can't mine them.

WINNING A CAMPAIGN SCENARIO

For the first scenario, you cannot mine any metals.

- **Defeating Eikthyr:** once you defeat Eikthyr, you can mine bronze in the following scenarios (defeating Eikthyr grants your party a special "Antler Axe" - there is no equipment card for this, like with the other Forsaken special reward items - it just means that it allows everybody to mine bronze from now on). Defeating Eikthyr also lets your party carry over a basic furniture (throne, bed or rug) for no cost. This is a permanent bonus and is repeated for each of the remaining scenarios in the campaign.
- **Defeating The Elder:** once you defeat the Elder in the second chosen scenario, you can

WORK IN PROGRESS

now mine iron as well as bronze (defeating the Elder gives your team a "crypt key", giving you access to the sunken crypts, where the iron is located). Defeating the Elder also lets each player have 2 power of Odin skills available. You can use either as you want, just remember to pay the stamina cost whenever you do. This is a permanent bonus and is repeated for each of the remaining scenarios in the campaign.

- **Defeating Bonemass:** once you defeat Bonemass in the third chosen scenario, you can now also mine silver (defeating Bonemass gives your team a special "wishbone" which helps you locate silver mines). Defeating Bonemass also lets each player keep an unlocked skill upgrade - choose 1 and place it on your portrait - it will be unlocked and ready for use in the final, fourth, scenario. You still get to draw 2 new upgrade skills at the start of the fourth scenario, in addition to this unlocked one.

Winning a scenario lets you keep your character and some of the stats, but not all:

- You start the next scenario with the health and stamina you ended the last scenario with.
- If you died, or did not succeed, you start with just 1 health and 0 stamina.
- Discard all experience cubes from your upgrade skill slots.
- Discard all cards and tokens.
- You can replace your 2 upgrade skills and your power of Odin skill, to not play 2 scenarios in a row with the same skills.

FORSAKEN POWERS

Each time you defeat a Forsaken, you unlock its Forsaken power - a special power that your group can activate twice in a scenario. If you have unlocked multiple, you have to decide which one to bring to the next scenario - you cannot have more than 1 available Forsaken power in a scenario.

- Place the corresponding Forsaken power card on the campaign board to remind you which one you chose.
- Add 2 tokens to it, to help you keep track of how many times you can use it in this scenario.
- Once a Forsaken power is activated (which is a free action), the activating player removes a token from the Forsaken power card and takes the Forsaken token to remind them who activated the power - the power will be active for 1 full round, meaning that each player can use it once in that round.
- The player with the Forsaken token discards this at the beginning of their next turn - it has then been active for a full round.

The Forsaken powers can be used outside the campaign once unlocked - just remember to only bring 1 of them to any given scenario.

The Forsaken powers are:

- **Eikthyr:** each player may move 2 extra spaces once in a movement action in their turn.
- **Elder:** Each player may double the result of the green resource die once in their turn.
- **Bonemass:** Each player may roll 1 extra defensive die in a combat in their turn.
- **Moder:** Each player may take 1 extra action in their turn.

LOOSING A CAMPAIGN SCENARIO

If you fail a scenario, you must replay it, or another one with the same Forsaken. Reset your character like when playing a normal, single mission, but keep any unlocked Forsaken rewards from previous scenarios in the campaign.

WORK IN PROGRESS

SCENERIOS

At the start of each game session, you must decide which scenario to play. We recommend you play them in ascending order, but you can choose the order as you like. Be warned, however, that the later scenarios can be harder than the earlier scenarios.

Note: As tiles are randomly distributed, you might run into altars for Forsaken bosses that are not used in that specific scenario. In these cases, simply treat the unused altars as mysterious ruins from ancient times.

GIFTED ITEMS

To ease your perilous journey into the dangerous lands of Valheim, the gods will gift you modest items to start your quest.

Each scenario shows what gifted items (resources or items) will be available in the first round.

- Place these tokens, in listed order, on top of the event deck for the scenario.
- Place only 1 token per player - the 4 tokens shown are only for a 4 player game, meaning that e.g. the fourth token mentioned will not be available in a game session with less than 4 players.

After your first turn in each scenario, you will not draw an Event card, but instead take 1 of the gifted items and add it to your inventory or resource stash.

WORK IN PROGRESS

MAKE YOUR OWN

Once you know the game and have played a few scenarios, you could make your own scenarios, as well - if you do, please share them online, for example on *Boardgamegeek.com*!

Maybe you have a great idea for combining Forsaken or event decks in the same scenario? New ways to use resources, tiles, or maybe special powers or interesting objectives? The possibilities are endless!

Here is a few tips for creating your own scenario:

- Most importantly, make sure the scenario has the right amount of tiles needed of the biomes relevant to your objective. It would be bad to miss the tile with the altar of the boss you need to summon, for example. Of course you can just instruct the players to make sure specific tiles are shuffled into the tiles used for the scenario.
- Bonemass missions are more tricky - make sure there are two meadows next to the swamp tiles, and use only three swamp tiles, initially. Again, of course you can get around this by changing the event deck for Bonemass, for example.
- Use gifted items to help players on their way - especially if an important resource could be hidden behind obstacles in the map layout.
- If you have islands in your scenario, make sure players have access to wood and hide on the initial island - otherwise they won't be able to create ships.

IN PROGRESS

SCENARIO 1: LORD OF THE STAGS

His antlers are branches of iron, they crack the rocks and bring down mountains. His hooves are the sound of thunder. His voice a howling gale.

You have arrived in Valheim, carrying only simple clothes and the material to construct your first home. After lighting the fire and getting some heat into your bones, you consider your first task to prove your worth to the gods: seek out and defeat Eikthyr, the huge creature that dominates these lands. Eikthyr is an abnormally large stag with iron chains wrapped around his electrified red antlers. It must be summoned in order for you to fight him. But first you must hunt the 2 biggest stags on the island. You must then bring their antlers as trophies to Eikthyr's altar. However, none of this is possible without the construction of gear or useful furniture at your home; you must take care to explore the surroundings in order to seek out valuable resources - maybe even some bronze from the dangerous black forest.

Objective: Collect 2 stag trophies and bring them to Eikthyr's altar in the meadows. You can then spend 1 action to summon and hopefully defeat Eikthyr.

Gifted items: , , , .

Setup: Take out the black forest tile with the altar - you won't be using this tile for this game session. The shuffle and distribute the rest of the black forest tiles. Also during setup, place a stag trophy token on the meadow tiles marked with it on the map. When you explore a tile with this token, place a stag trophy on the empty space.

In order to collect the trophy, you must go there and successfully collect it, like when hunting deer - however, you must roll a double result, in order to succeed against these prime stags - single results do not count (and no bonus for using the knife). No are gathered from these special Stags, only the Trophy token. Once the first trophy token has been collected, Greylings go feral - flip the Greylings creature card to its veteran side.

Event deck: Eikthyr deck.

WORK IN PROGRESS

SCENARIO 2: KING IN THE WOODS

First of the Forest, King-in-the-Wood, Lord over those who dwell at his feet. His roots will grow where cities once stood, their blood his wine, their flesh his meat.

The Elder - the boss monster of this island - is a towering humanoid tree-like entity with multiple thin branches sprouting out of his slender, bark-covered body. You must seek out the forsaken altar in the black forest and summon the Elder, in order to defeat him. But the Greydwarves in the area pose a great menace and must be dealt with first. You must therefore first locate and burn the 2 Greydwarf nests in the forest.

Objective: Locate the 2 GreyDwarf nests in the black forest and destroy them: When no creatures are present at a space with a nest, you can spend 1 action to destroy the nest, if you have a fire weapon. Mark it as destroyed with a fire token. No Greydwarf can spawn here again.
Once the nests have been destroyed, locate the forsaken altar and spend 1 action here to summon the Elder and start the end fight. Defeat the Elder.

Gifted items: , , , .

Beware: The Elder will break through any armor, unless you destroy the four branches extruding from his shoulders. Whether you wield ranged or melee weapons, the Elder cares not - his armor is strong, and his resolve even stronger.

Event deck: The Elder deck.

Greydwarf's Nest

The Altar

WORK IN PROGRESS

SCENARIO 3: ABOMINATION IN THE SWAMPS

There is an evil abomination lurking across the water; in the swamps on a small island.
Seek out and destroy the large creature. It is a large, tree-like entity, and it moves around using its branch-like limbs. The abomination has a poisonous attack, so you might want to protect yourself against this.

This will be no easy task - the lesser creatures of the land can be challenging for the unprepared, but the large monsters are even tougher adversaries. To even get to the Abomination, you will need to construct a boat. Once built, it can take you to any shore on the swamp island. The meadows surrounding your house, as well as the more dangerous black forest, should provide the resources needed. The swamps will have , great for making better weapons and protection, but take care - the swamps are deadly for the unprepared.

Objective: locate and defeat the Abomination in the swamps.

Gifted items: , , , .

Setup: take out the swamp tile with the altar (the big skull) and the black forest tile with the altar - you won't be using those tiles for this game session.

Event deck: Use the Eikthyr pr the Elder deck. Take out the 2 cards saying either "Eikthyr arrives" or "The Elder arrives". You won't be using these in this scenario.

The Altar

The Altar

WORK IN PROGRESS

SCENARIO 4: UNDEAD FROM THE SWAMPS

Wanderer, look to your feet, that tread upon our tomb. One thousand bones without their meat, will drag you to your doom. Bonemass - the boss monster of this island - is a gigantic humanoid mass composed of toxic ooze, mud and skeletal remains, likely absorbed from nearby tombs situated close to its altar.

Bonemass can be summoned at any time by the Forsaken Altar in the swamps. But first, you must find 2 to sacrifice at its altar. They are hidden at the 2 sunken crypts in the swamps. When you reveal a tile with a sunken crypt, add a random token face-down to the crypt. When a player enters a space with a crypt, the player flips the token and fights the creature(s) shown on the token. Remember to add any bonus effects shown on the token. Once it is defeated, the player adds the token to their resource stash.

Objective: Find 2 from the 2 crypts in the swamps. Then seek out the altar in the swamps and spend 1 action to summon Bonemass. Only then can you fight and defeat Bonemass.

Gifted items: , , , .

Beware: Bonemass is strong in close combat, spreads poison and is immune to fire.

Event deck: Bonemass deck.

WORK IN PROGRESS

SCENARIO 5: FROZEN CHALLENGES

The frozen mountains with their ice-covered peaks and rock caves tempts you with the rich silver deposits. But the mighty Golem and the fierce Fenrings reside there, as well. The gods will test your resolve and demand that you clear the mountains of all creatures.

Objective: Clear the mountains of creatures. Once all mountain tiles are clear of creatures, you have completed the objective.

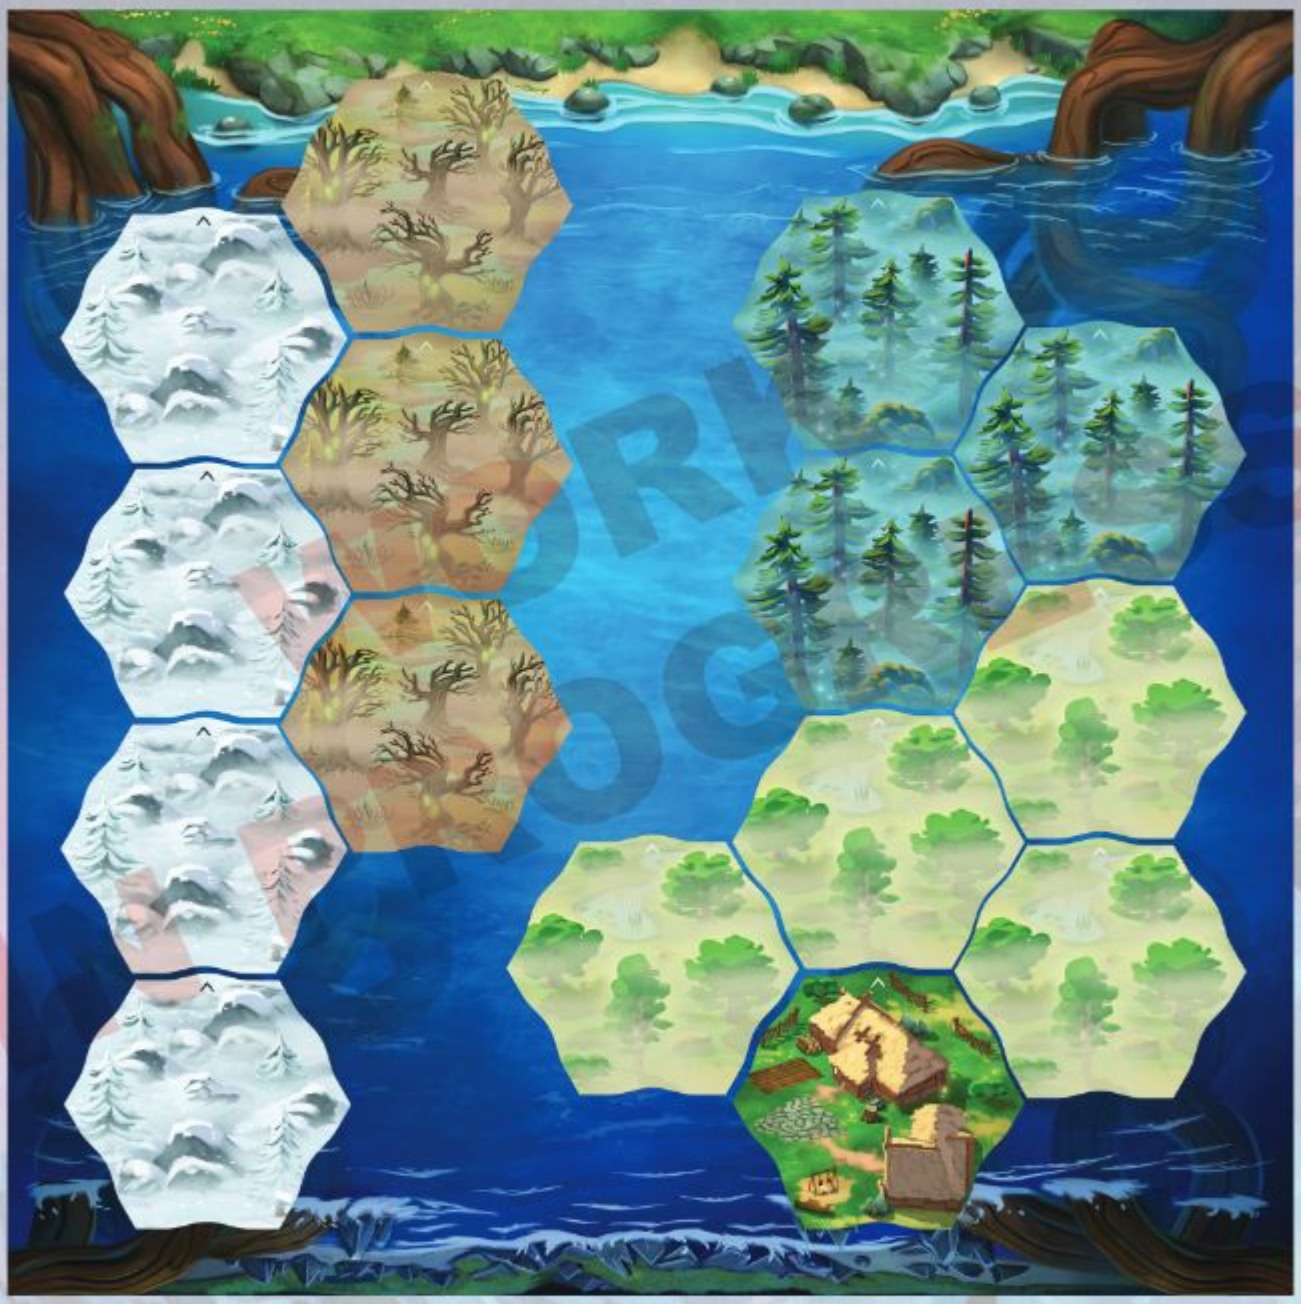

Gifted items: , , , .

Event deck: The Moder deck, but take out the cards saying "Moder arrives" - no Forsaken will arrive in this scenario.

The Altar

WORK IN PROGRESS

SCENARIO 6: THE FOREST DRAGON

Moder - a massive frost dragon with black scales, a white fur mane and tattered wings, dominate these lands. Her cold mountains are guarded by nightmarish Fenrings and the mighty Golem. From time to time, Moder herself will appear, to spread the cold and freeze anybody she comes across (the numbers on the map are used when that happens - see the appropriate event cards).

In order to slay this mother of drakes, you must locate her altar in the mountains and activate it. But the mighty dragon must be provoked first, or she will not be summoned: You must therefore seek out Haldor in the Black Forest and buy a rare item from him. The emanating power from the rare item will taunt Moder enough for her to finally be summoned. Ranged weapons are best when encountering this winged boss - a critical hit from a ranged weapon will stop her from moving to her nest. There, she will be even stronger. Also, be prepared for a chilled experience as Moder and her minions attack with stamina draining frost strikes.

Objective: Buy (and keep) 1 rare item from Haldor. Then locate the altar in the mountains and spend 1 action to summon Moder. Then defeat Moder in the final combat.

Special rule: Once you have obtained 1 rare item, the creatures on the island grow angry: turn them all to their veteran side for the rest of the scenario.

Gifted items:  .

Event deck: Moder deck.

The Altar

Haldor

WORK IN PROGRESS

SCENARIO 7: EIKTHYR HAS RETURNED

Eikthyr is back, and once again it is your task to seek out the king of deer and defeat him. The meadows and the swamps should provide enough resources for you to defeat Eikthyr - but not the absence of the black forest on this island - you will have to do without the cobber.

Objective: Collect 2 stag trophies and bring them to Eikthyr's altar in the meadows. You can then spend 1 action to summon and hopefully defeat Eikthyr.

Gifted items: , , , .

Special rule: during setup, place a stag trophy token on the meadow tiles marked on the map and follow the rules for the prime stags as stated in scenario 1.

Event deck: Eikthyr deck.

The Altar

Stag Trophy

WORK IN PROGRESS

SCENARIO 8: SO NEAR, AND YET...

The Elder is back, and this time our settlement is close to his altar. However, we are surrounded by dangerous lands, and the relative safety of the meadows is far away.

Locate the Forsaken altar in the black forest, in order to awaken the Elder. But first, 2 Greydwarf nests must be located and destroyed by means of fire. To do so, spend 1 action to burn the nest in your space, if you are wielding a fire weapon.

Caution: the needed to burn them can only be found in the meadows located behind the dangerous mountains. Plan your actions wisely. Powerful creatures lurk in the mountains. Without the plentiful resources from the Meadows, your options will be limited.

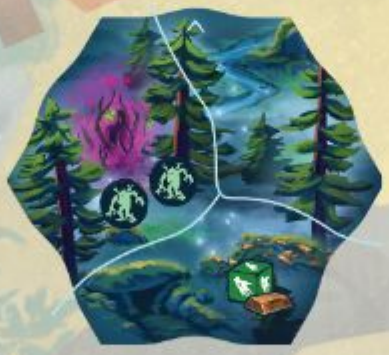

Objective: Locate the 2 Greydwarf nests in the black forest and destroy them: when no creatures are present at a space with a nest, you can spend 1 action to destroy the nest, if you have a fire weapon. Mark it as destroyed with a fire token. No Greydwarf can spawn here again.
Once the nests have been destroyed, locate the forsaken altar and spend 1 action here to summon the Elder and start the end fight. Defeat the Elder.

Gifted items: , , , .

Event deck: The Elder deck.

The Altar

Greydwarf's Nest

WORK IN PROGRESS

SCENARIO 9: THE SWAMPY LAND

Bonemass, the evil glob of decayed bodies and bones, once again spreads its vile stench from the swamp. Seek out the altar on the swamp peninsula and banish BoneMass.

Bonemass can be summoned at the Forsaken altar in the swamps. However, you will need the skull of Bokkar the Cave Troll to do so. Bokkar must be lured out of hiding by building a grand house; when you build your 5th furniture, the envious Troll and his Skeleton buddy will descend on your house. Place a Troll (relocate from another tile, if already in play) and a Skeleton at your house. Once defeated, you can summon Bonemass.

Objective: Build 5 furniture and defeat the appearing Troll. Then seek out the altar in the swamps and spend 1 action to summon Bonemass. Only then can you fight and defeat him.

Beware: Bonemass is strong in close combat, spreads poison and is immune to fire.

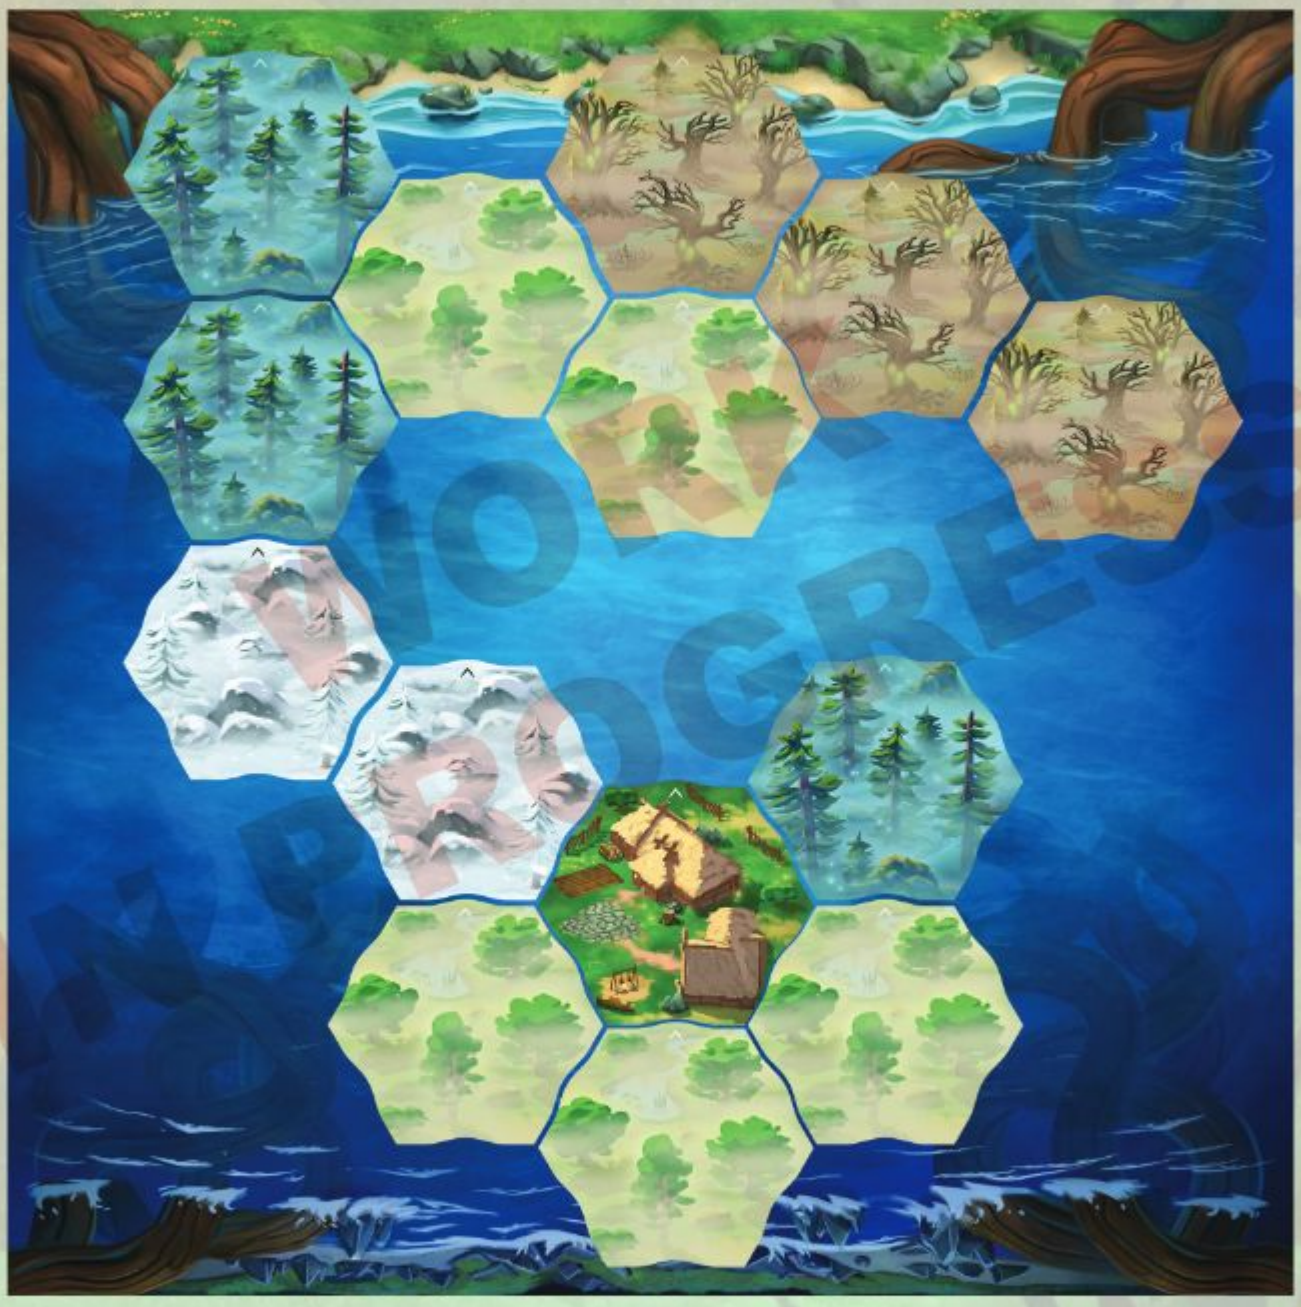

Gifted items: , , , .

Event deck: Bonemass deck.

The Altar

SCENARIO 10: THE PATH OF THE TALISMAN

Moder is back, her mind set for cold and deadly revenge.

Objective: lay down reroll tokens to create the path of the Talisman from your house to the altar in the mountains, including the space with the altar itself (no token needed on the house). Then defeat Moder in the combat that follows. Placed talismans cannot be picked up again. If you run out of tokens to place, you may take one that has already been placed, and place it at the new location. You can lay down the talismans in any order you want.

Gifted items: , , , .

Event deck: Moder deck.

The Altar

Reroll Token

WORK IN PROGRESS

SCENARIO 11: THE STAGS AND THE LAKE

Eikthyr is back, with its altar located somewhere around the great lake. Bronze might be sparse on these parts, but use what you can find, and defeat Eikthyr.

Objective: Collect 2 stag trophies and bring them to Eikthyr's altar in the meadows. You can then spend 1 action to summon and hopefully defeat Eikthyr.

Gifted items: , , , .

Special rule: during setup, place a stag trophy token on the meadow tiles marked on the map and follow the rules for the prime stags as stated in scenario 1.

Extra rule: you must impress the Gods with your improved wisdom; only when each player has completed at least one of their upgrade skill challenges can the end combat be triggered. In a game with less than 3 players, all skill challenges must be completed first.

Event deck: Eikthyr Deck.

The altar

WORK IN PROGRESS

SCENARIO 12: DISTRACTING DIVERSITY

The Elder is back, and he has taken over this diverse landscape. It's a beautiful, chaotic mix of meadows, black forests, swamps and mountains, split up by the sea. You must make the best of what resources you can get, and then find a way to locate and defeat the Elder.

Objective: Locate the 2 Greydwarf nests in the black forest and destroy them. When no creatures are present at a space with a nest, you can spend 1 action to destroy the nest, if you have a fire weapon. Mark it as destroyed with a fire token. No Greydwarf can spawn here again.
Once the nests have been destroyed, locate the Forsaken altar and spend 1 action here to summon the Elder and start the end fight. Defeat the Elder.

Gifted items: , , , .

Special rule: Once you have burned the first nest, the creatures of the forest grow angry: turn all Greylings, Greydwarves, Skeletons and the Troll to their veteran side.

Event deck: The Elder deck.

Greydwarf's Nest

WORK IN PROGRESS

SCENARIO 13: LANDS OF SORROW

Bonemass is back, this time tormenting the islands of this tormented land. With no meadows in sight, you will have to make the best of the resources in the black forest and the mountains. Make sure you save enough resources to build a boat.

Bonemass can be summoned at any time by the Forsaken altar in the swamps. But first, you must find 2 to sacrifice at its altar. They are hidden at the 2 sunken crypts in the swamps. When you find a sunken crypt, add a random face-down to the crypt. When a player enters a crypt, the player reveals and fights the shown creature on the tile. Once it is defeated, the player has 1 of the 2 needed bones.

Objective: Find 2 from the 2 crypts in the swamps. Then seek out the altar in the swamps and spend 1 action to summon Bonemass. Only then can you fight and defeat Bonemass.

Gifted items: , , , .

Special rule: The swamps are especially nasty in this area. Use veteran Draugr, Skeletons and Abomination in this scenario.

Event deck: BoneMass deck.

SCENARIO 14: FOUR ISLANDS AND A MOTHER DRAGON

Moder is back, dominating the lands from one of the 4 islands. It is up to you to locate both her nest and the golem that guards her egg.

Objective: defeat the golem in the mountains to obtain the egg. Then locate the altar in the mountains and spend 1 action to summon Moder. Then defeat Moder in the final combat.

Gifted items: , , , .

Special rule: The Golem in this part of the land is the toughest of them all: use the veteran Golem in this scenario.

Event deck: Moder deck.

TOKENS OVERVIEW

PLAYER TOKENS

Bomb: To use at anytime during combat. The token can be used only once. There can be only 2 bomb tokens on the playerboard.

Fire: Once you built the fire table and spent 1 , you can ignite one of your weapons. This will add 1 point to your attack with this weapon each time.

Frozen: Some enemy's special attacks can make your character frozen. This will remove 1 stamina each round until you defeat that creature.

Honey Comb: Spend 1 action in the house to gain a honeycomb token. It can take up any consumable space on your player board. At any time in your turn, you can spend 1 honeycomb token to gain 1 extra action immediately

Poison: Some enemy's special attacks can make your character poisonned. This will remove 1 health point each turn until you defeat that creature.

Health Mead: To drink at any point. Will give you 2 health points automatically. Can be used only once. The playerboard can only hold 2 mead tokens of any kind.

Resistance Mead: To drink at any point. Will remove one of the special attack effects (frozen or poisonned) automatically. Can be used only once. The playerboard can only hold 2 mead tokens of any kind.

Stamina Mead: To drink at any point. Will give you 2 Stamina Points automatically. Can be used only once. The playerboard can only hold 2 mead tokens of any kind.

Re-roll: To use at any point. Will allow youto reroll 1 to all of yout player's dice. Can be used only once. The playerboard can only hold 2 mead tokens of any kind.

Tombstone (1 for each player): When you are defeated by a creature, place this token on the spot where you lost all your health points.

WORK IN PROGRESS

BOSS TOKENS

Withered Bones: these tokens are used to summon Bonemass. Every time you find a crypt space, you place one of these there. To collect the token from your space, you must flip it and defeat the creature on the backside of the token.

Dragon Egg: the dragons egg is used to summon Moder. It can be gained in various ways depending on the scenario.

Goop: these tokens are used in Bonamss' boss fight. Depending on the situation, they might damage or poison players.

Deer Stag: these tokens are used to summon Eikthyr. They can be gathered by spending an action and rolling a double result with the green die. The tokens have antlers throphy on the back.

Roots: These tokens are used by The Elder in event cards and boss fights. They will usually slow your movement.

WORK IN PROGRESS

RESOURCE TOKENS

Bronze: Can be found in the black forest or by defeating a Troll.

Coins: Can be found in the chests or by defeating a Stone Golem, a Troll or an Abomination.

Hide: Can be found in the meadows or by defeating a Fenring.

Resin: Can be found by defeating a Geryling or a Fenring.

Stone: Can be found in the meadow or by defeating a Stone Golem or a Greydwarf.

Silver: Can be found in the mountains or by defeating a Stone Golem.

Wood: Can be found in the meadows and in the black forest or by defeating a Greydwarf or an Abomination.

CREATURE OVERVIEW

These creatures are all aggressive and can spawn at various times throughout the biomes. They start on their basic side, but as scenarios unfold, you might be instructed to flip their card to the tougher veteran side, showing a star at the top.

Greyling:
These mossy, tree-like creatures are aggressive but small. They should be easy to handle with even basic equipment. A normal Greyling does not have any special attacks, so a ! roll is ignored. Veteran Greylings do give damage with their special attack, however - just like Greydwarves.
1
1
Special: none
Loot:

Greydwarf:
A stronger cousin to the Greyling, these forest beings nest in the black forest. They have slightly more health than Greylings but is usually only a threat in greater numbers. If you ever come across one of their nest, spend an action to light it on fire - if you have a fire weapon - and no Greydwarves can spawn there again.
3
1
Special: Extra Damage
Loot:

Skeleton:
Cursed bonemen failing to find peace after death. They have modest health but rolls 2 dice in combat. Their special attack is actually a block, reducing incoming damage by 1.
2
2
Special: Shield Breaking
Loot: none

Draugr:
Undead vikings from a distant past, now bloated corpses wandering through the swamps. They are stronger than Skeletons, immune to fire damage and their special attack is a poisonous strike - stay clear of it and defeat them quickly.
4
2
Special: Poisoned
Loot: none

WORK IN PROGRESS

Troll:
These big humanoids are the first of the large creatures in the game. They reside in the black forest. They are strong and tough and should be avoided until you are properly armed. Their special attack with strike right through any armour and deal damage at the same time.

6

3

Special: Shield Breaking

Loot:

Abomination:
The second large creature, an impossible conglomeration of living branches and vines. The Abomination is naturally shielded, reducing incoming damage by 1 by every strike. Like Draugr they have a poisonous strike as their special ability.

7

3

Special: Poisonned

Loot:

Fenring:
These wolfmen from the cold mountains have a special frost attack and deal lots of damage. They roll three dice in combat, even in their basic form.

5

3

Special: Frozen

Loot:

Stone Golem:
The toughest of the large creatures, these stone monsters from the mountains are shielded, very strong and have a special frost attack.

8

3

Special: Frozen

FURNITURES

When a player in the house spends a crafting action to construct furniture, they pay the resource cost indicated on the furniture sheet, and place the furniture in the house. Furniture can give benefits to players that end their turn in the house or even unlock new actions like brewing, igniting and fabricating.

Rug: when you end your turn in the house, you can now recover 1 stamina.
Cost:

Bed: when you end your turn in the house, you can now recover 1 health.
Cost:

Throne: when you end your turn in the house, you can now add a re-roll token to one of your re-roll slots on your playerboard (max. 2).
Cost:

Beehive: spend 1 action in the house to gain a honeycomb token. The honeycomb token can take up any consumable space on your playerboard. At any time in your turn, you can spend 1 honeycomb token to gain 1 extra action immediately.
Cost:

Cauldron: it unlocks better benefits on food cards. With the cauldron the benefits at the bottom of all food cards can now be chosen instead of the benefits on top.
Cost:

Table: it unlocks more slots for prepared food. With the table you can now reveal up to 2 food cards.
Cost:

Fermenter: spend 1 action in the house to gain any mead token of your choice. Add the token to one of the mead slots on your player board (max. 2)
Cost:

Bomb table: spend 1 action in the house to gain any bomb token. Add the token to one of the bomb slots on your player board (max. 2)
Cost:

Fire Table: Spend 1 to add a fire token to one of your weapons. Weapons with fire deal 1 extra damage in combat against creatures not resistant to fire.
Cost:
